

# Using HTML in your layouts

Design in your browser or device/simulator.

## Templating with mustache

Use `<div>` tags with class names that match their content.

```
<div class="person">
  <h2>{{person.name}}</h2>
  <h3>{{person.username}}</h3>
  
</div>
```

Ensure the **red** names match.

## Designing for tablet and mobile

Use bootstrap classes to hide and unhide content for different platforms.

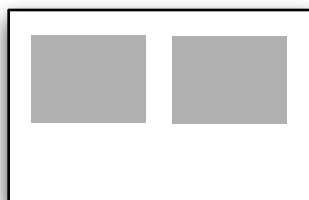

```
<div class="visible-tablet">
  <!-- This will only be shown to tablets. -->
</div>
```

## Use prescribed columns and classes

Use bootstrap rows and columns to provide responsive layouts.

```
<div class="row-fluid">
  <div class="span6">
    <h3>Product 1</h3>
  </div>
  <div class="span6">
    <h3>Product 2</h3>
  </div>
</div>
```

Tablet

Phone
